

## DevOps Training - Day 1 Assignment

### Installing Oracle VirtualBox and Running Unix Commands on Ubuntu

#### Step 1: Install Oracle VirtualBox

- Download from [VirtualBox](#).
- Install it.

#### Step 2: Download Ubuntu ISO

- Download the LTS version of [Ubuntu](#). ISO Image.

#### Step 3: Create a Virtual Machine

- Open VirtualBox → Click New.
- Set Type to Linux, Version to Ubuntu (64-bit).
- Allocate 4GB RAM and 20GB storage.
- Attach the Ubuntu ISO and start the VM.
- Complete the required steps to complete the installation process.

#### Step 4: Open Ubuntu

Run these commands in the terminal:

- `sudo apt-get update`
- `sudo apt-get upgrade`
- `sudo apt install -y apache2 apache2-utils`

## Conclusion

We successfully installed VirtualBox, set up Ubuntu, and ran essential update commands. This lays the groundwork for future DevOps tasks.
